Sakthi Priya T 251801283-2025-AIDS S2

Started on	Thursday, 6 August 2026, 10:14 AM
State	Finished
Completed on	Thursday, 6 August 2026, 12:10 PM
Time taken	1 hour 56 mins
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;
```

```
    int s =1;
```

```
    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main(){
    int n;
    scanf("%d", &n);
    int count = 0;
    int i = 1;
    count++;
    int s = 1;
    count++;
    while(1){
        count++;
        if (s > n){
            break;
        }
        i++;
        count++;
        s += i;
        count++;
    }
    printf("%d", count);
    return 0;
}
```

	Input	Expected	Got	
✔	9	12	12	✔
✔	4	9	9	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.

Completed on	Tuesday, 25 August 2026, 9:52 PM
Time taken	1 min 3 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main(){
    int n;
    scanf("%d", &n);
    int count = 0;
    if (n == 1){
        count++;
    }else{
        count++;
        for(int i = 1; ; i++){
            count++;
            if(i > n)
              break;
            for(int j = 1; ;j++){
                count++;
                if(j > n){
                    break;
                }
                count++;
                count++;
                break;
            }
            count++;
        }
    }
    printf("%d", count);
    return 0;
}
```

Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
   for (i = 1; i <= num;++i)
   {
    if (num % i== 0)
       {
         printf("%d ", i);
       }
    }
 }
```

Note: No need of counter increment for declarations and scanf() and counter variable printf() statement.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include<stdio.h>
int main(){
    int n;
    scanf("%d", &n);
    int count = 1;
    for (int i = 1; i <= n; i++){
        count++;
        count++;
        if(n % i == 0){
            count++;
        }
    }
    printf("%d", count);
    return 0;
}
```

Completed on	Tuesday, 25 August 2026, 2:07 PM
Time taken	19 days 2 hours
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time

complexity using counter method.

```
void function(int n)
{
    int c= 0;
    for(int i=n/2; i<n; i++)
        for(int j=1; j<n; j = 2 * j)
            for(int k=1; k<n; k = k * 2)
                c++;
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

int count = 0;   // global counter

void function(int n)
{
    int c = 0;
    count++;                // int c = 0;

    int i = n / 2;
    count++;                // 1st test of "i<n"
    while (i < n)
    {
        int j = 1;
        count++;            // 1st test of "j<n"
        while (j < n)
        {
            int k = 1;
            count++;        // 1st test of "k<n"
            while (k < n)
            {
                c++;
                count++;     // c++ statement
                k = k * 2;
                count++;     // next test of "k<n"
            }
            j = 2 * j;
            count++;         // next test of "j<n"
        }
        i++;
        count++;             // next test of "i<n"
    }
}

int main()
{
    int n;
    scanf("%d", &n);

    function(n);

    printf("%d\n", count);
    return 0;
}
```

	Input	Expected	Got

Started on	Tuesday, 25 August 2026, 9:53 PM
State	Finished
Completed on	Tuesday, 25 August 2026, 9:56 PM
Time taken	2 mins 23 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>

void reverse(int n)
{
    int rev = 0, remainder;
    int count = 0;

    count++;

    while (n != 0)
    {
        count++;
        count++;
        remainder = n % 10;

        count++;
        rev = rev * 10 + remainder;

        count++;
        n /= 10;
    }

    count++;
    count++;

    printf("%d", count);
}

int main()
{
    int n;
    scanf("%d", &n);

    reverse(n);

    return 0;
}
```
